

INTERVIEW PREP GUIDE

Junior Software Developer + AI Role

Azure Focus | Product-Based Company

Rohit Ranvir

B.E. Computer Science | Maharashtra

Python Full Stack | Django | React | FastAPI | LLM Integration

Django

FastAPI

React

PostgreSQL

Celery

Azure

LLM

Prepared for tomorrow's interview

TABLE OF CONTENTS

1. Your Elevator Pitch & Professional Summary

2. Project Deep-Dives

2.1. Multi-Tenant SaaS Expense Manager

2.2. Vendor Connect India

2.3. Smart Review AI (LLM Project)

2.4. Autonomous Insurance Claims Agent

3. Azure Fundamentals

4. AI / LLM Concepts

5. Behavioural Questions (STAR Method)

6. Common Interview Pitfalls

7. Practice Delivery Tips

8. Mock Interview Scenarios

1. YOUR ELEVATOR PITCH & PROFESSIONAL SUMMARY

60-Second Polished Intro

Good morning! My name is Rohit Ranvir, and I'm from Maharashtra. I completed my Bachelor of Engineering in Computer Science in 2025 with a CGPA of 7.5. During college I built strong skills in Python full-stack development — primarily with Django, Django REST Framework, FastAPI, and React — and got hands-on with production concerns like multi-tenancy, CI/CD, JWT security, and Celery-based background processing.

Key Stats

Metric	Detail
CGPA	7.5 / 10
Publication	IJISRT 2025 - NLP Deep Learning
Internship	Zidio Development (Jan-Apr 2025)
REST APIs	15+ APIs built

2. PROJECT DEEP-DIVES

2.1 Multi-Tenant SaaS Expense Manager

Stack: Django, DRF, PostgreSQL, Celery, Redis, React

A full SaaS platform where multiple organisations share one deployment with complete data isolation via PostgreSQL schema-based multi-tenancy.

- Multi-tenancy: Each tenant gets a separate PostgreSQL schema
- 15+ REST APIs with JWT authentication and RBAC

- Celery + Redis for async report generation

2.4 Autonomous Insurance Claims Agent

Stack: FastAPI, Groq API, LLaMA 3.3-70B, pdfplumber, React

AI agent that extracts 7 fields from insurance claim PDFs and routes claims to appropriate queues.

- PDF text extraction using pdfplumber
- LLM extraction with prompt engineering
- Rules-based routing: Fast-Track, Manual Review, Investigation, Specialist

3. AZURE FUNDAMENTALS

Service	Purpose
App Service	PaaS web/API hosting
Azure Functions	Serverless compute
Blob Storage	Object storage
Azure SQL	Managed PostgreSQL/MySQL
Key Vault	Secrets management

4. AI / LLM CONCEPTS

- **LLM:** Large Language Model - neural network trained on text
- **Prompt Engineering:** Designing inputs to get desired outputs
- **Temperature:** Controls randomness (0=deterministic, 1=creative)
- **RAG:** Retrieval-Augmented Generation - search + LLM

5. BEHAVIOURAL QUESTIONS - STAR METHOD

Use STAR: Situation, Task, Action, Result

6. COMMON INTERVIEW PITFALLS

- Vague tech answers - Always explain WHY
- Forgetting numbers - Keep stats ready
- Not asking questions at the end

7. PRACTICE DELIVERY TIPS

- Record yourself answering questions

- Know your resume numbers cold
- Prepare 3 questions for the interviewer

8. MOCK INTERVIEW SCENARIOS

Technical Question

Q: Walk me through your most complex project.

A: The insurance claims agent - React frontend uploads PDF, FastAPI backend extracts text with pdfplumber, Groq LLM extracts structured JSON, rules engine routes to appropriate queue.

Azure Question

Q: How would you deploy on Azure?

A: Containerize with Docker, push to Azure Container Registry, deploy to App Service or Container Apps, use Azure SQL for database, Key Vault for secrets.

YOU'VE GOT THIS, ROHIT!
